Hands-on Projects

SET - 2

1. Create a PHP script that retrieves and displays data from a MySQL database.
 - a) Create a products upload page where it will contain product details like 'name', 'price', 'description'.
 - b) Use a "products" table that includes fields like product name, price, and description.
 - c) Display all products dynamically in an HTML table format.
 - d) Add a "Edit" button next to each product that updates it from the database when clicked.

Or

2. Write a PHP application that connects to a MySQL database and displays a list of students from a "students" table.
 - a) The table should include columns for id, name, email, roll number, email, college and branch .
 - b) Use select input type for college and branch.
 - c) Fetch and display the data dynamically on the webpage.
 - d) Add a "Delete" button next to each student that removes it from the database when clicked.
