## **Hands-on Projects**

### **SET - 1**

1. Create a simple user login system using PHP and MySQL. Your project should include:

- a) A registration page where users can sign up with their username and password.
- b) A login page where users can log in using their credentials.
- c) Use MySQL to store user details in a users table.
- d) Implement basic form validation for empty fields.

Or

2. Develop a user registration system using PHP and MySQL that includes:

- a) A form for entering username, email, and password.
- b) Store the user data securely in a MySQL table.
- c) Include functionality to check whether the username already exists before inserting the data.
